Automation And AI: Use Cases And What's In It For You

Revolutionizing Finance and Accounting

Introduction

Mitch Thompson
Digital Growth Director
Mitch.Thompson@CLAconnect.com
(317) 569-6154

Mitch Thompson - CLA

Learning Objective

At the end of the session, you will be able to:

- Identify how automation can improve operations

Key Objectives

Understanding the Basics of AI and Automation: Gain a comprehensive understanding of how AI and automation technologies work, specifically in the context of accounting and finance

Exploring Real-World Use Cases: Discover a range of practical use cases of AI and automation in financial processes

Benefits and Impact on Efficiency: Learn how implementing AI and automation can significantly improve efficiency, reduce errors, further organizational mission, and improve the lives of the workforce

Future Trends and Adaptation Strategies: Gain insights into how your organization can adapt and stay ahead in this rapidly evolving field, including strategies for implementation and overcoming potential challenges

Agenda

- Understanding the Basics
- Benefits
- Use Cases
- How to Implement
- Future Trends
- Demonstration of tools
- Q & A

Polling Question

How Transformative Do You Believe AI Will Be?

A: I think it's overhyped and unlikely to make much change.

B: Cautiously optimistic for how it will change how we work.

C: This is the fifth industrial revolution.

D: I don't know enough to say but I want to know more.

Gartner Hype Cycle

An Introduction Into Data, Automation, & AI

Definitions

Data and Business Intelligence

Automation

AI & Generative AI

Large Language Models

Data & Business Intelligence

- **Data** is the raw, unprocessed facts and statistics collected together for reference or analysis. In government, it is anything quantifiable and measurable, such as budget numbers, crime number, population demographics, and EMS statistics as examples. Data is the foundation to gain knowledge to make strategic decisions. Data is neutral and must be processed and analyzed to create value.
- **Business Intelligence** are the tools, technologies and methodologies used to collect, integrate, analyze and present the data as business information. BI is to help make better decisions through the transformation of data into actionable knowledge. This is done through visualization, analysis, historical and predictive trending, and performance management.

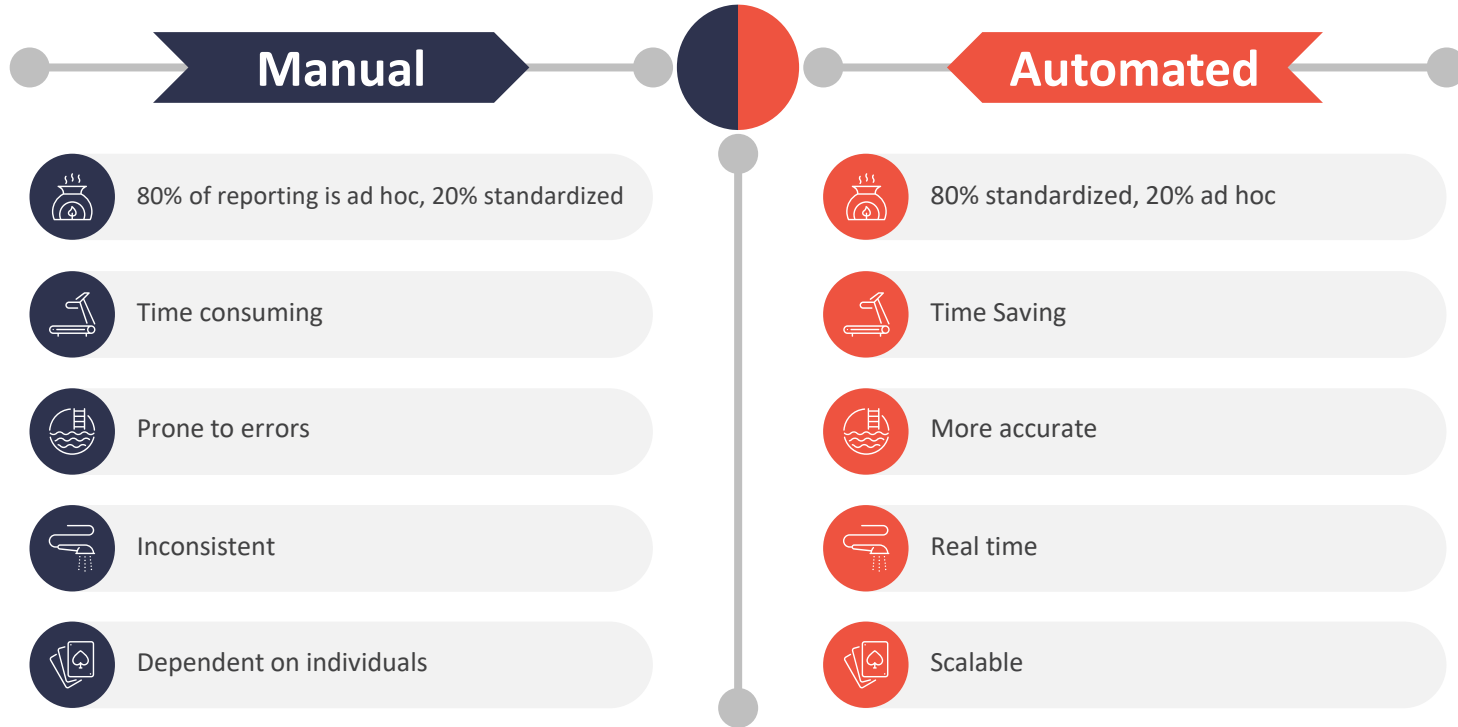

Automation

Automation is the technique, method, or system of operating or controlling a process by highly automatic means reducing human intervention to a minimum. In Government environment this is seen in various reporting, integrating systems, computer vision and the implementation of large language models.

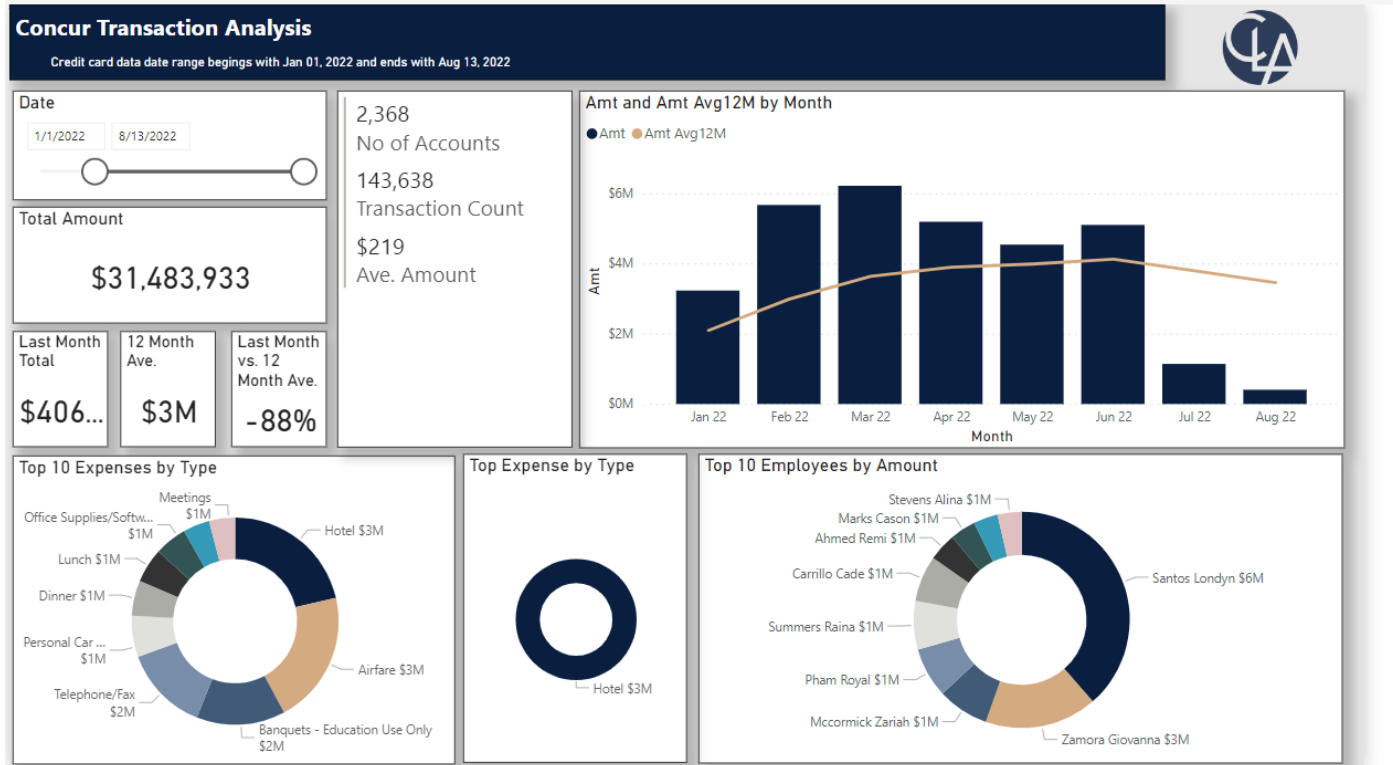

Manual Vs. Automated Reporting

A Comparison

Example Of BI And Automation

What Is Artificial Intelligence?

- AI is the ability of a computer, or a robot controlled by a computer, to do tasks that are usually done by humans because they require human intelligence and discernment
- AI models are programs that analyze data sets and make predictions. AI modeling replicates human decision making and is more accurate and effective when it receives/trains on multiple data points
- Types of AI
 - Automated Data Capture - AP Automation
 - Recommendation/Personalization - Amazon, Netflix, etc
 - Generative – content creating AI like ChatGPT
 - Anomaly Detection – fraud alerts
- AI is a tool to supplement and augment daily functions to become more productive/helpful/resourceful

Comparing Traditional Computing Vs. AI

- Traditional Computing: Set of explicit instructions for a specific task
- Artificial Intelligence (AI): Machines learning and making decisions from data
 - Machine Learning
 - Deep Learning
 - Statistics

What Is a Large Language Model?

- LLMs are a specific type of AI focused on understanding, generating, and working with human language. They are trained on vast amount of text data to predict the next word in a sentence, understand context, answer questions and more.
- Example is Generative Pre-trained Transformers (GPT) – focused on a particular set of content or material, for example your agency policies and procedures.

What Is GPT?

GPT is a kind of Large Language Model: Able to generate novel, human-like text, write code, and create datasets

Goal of GPT project was to create chat agent that can interact conversationally, generate coherent, relevant content, answer follow up questions.

Trained on websites, books, and online material.

Human AI trainers helped GPT models provide more desirable outputs via reinforcement learning.

OpenAI released ChatGPT November 2022

Many updates and other new generative AI apps & services

GPTs

OpenAI

- ChatGPT 3.5
- ChatGPT 4.5
- Custom GPTs
 - Image generation
 - Academic research
 - Coding

Other Organizations

- Google Bard & Gemini
- Facebook & Instagram Messenger
- Snapchat AI Chatbot
- Many research orgs & startups developing models & tools

AI Today – Audience Participation

- Can you give examples of AI in your daily personal or professional life today?

Time Magazine 2011

1 The accelerating pace of change ...

2 ... and exponential growth in computing power ...

Computer technology, shown here climbing dramatically by powers of 10, is now progressing more each hour than it did in its entire first 90 years

COMPUTER RANKINGS

By calculations per second per \$1,000

3 ... will lead to the Singularity

Benefits And Impact

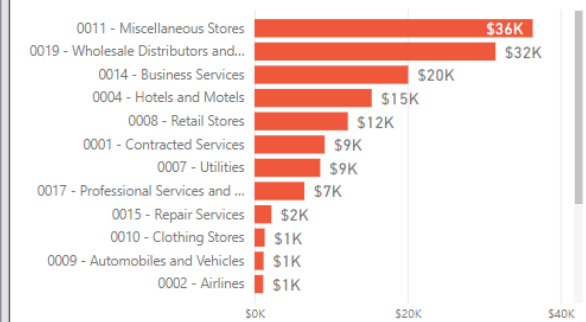

- Improve Efficiency
- Improve Accuracy
- Improve Organizational Capabilities
- Improve Employee Satisfaction

Total Amount and Nbr of Trans per Month

Total Amount by Category Code

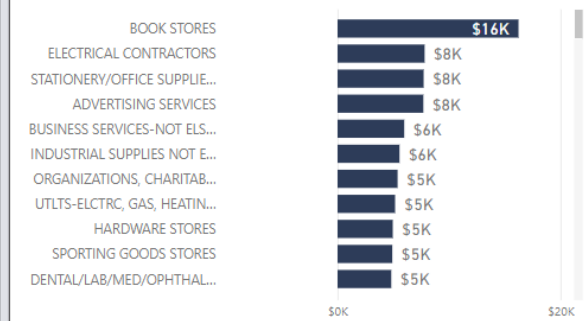

Total Amount by Department

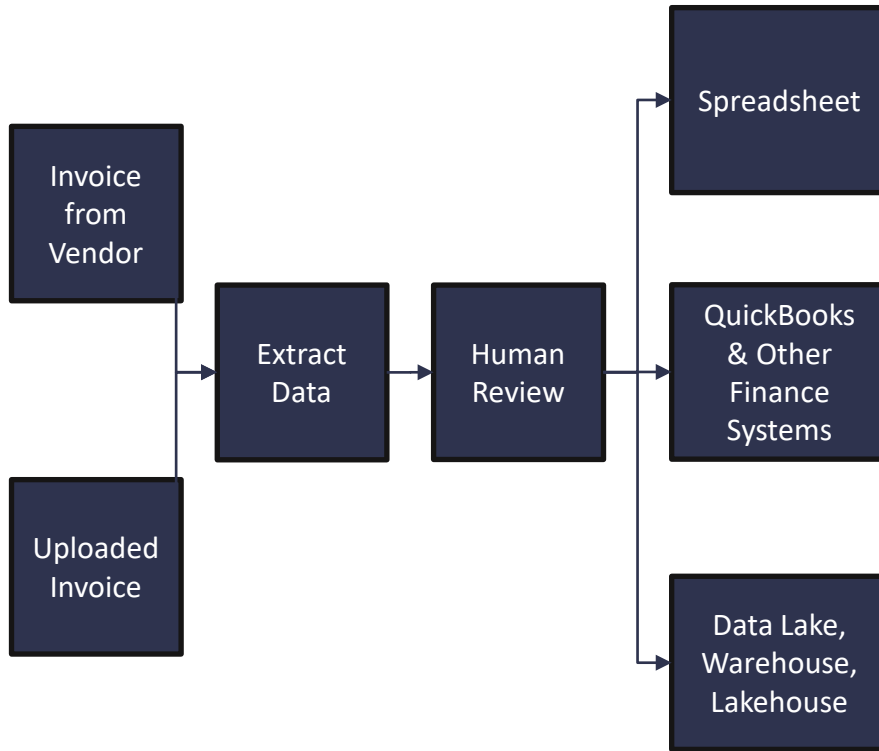

Merchant Name	SumTransAmt
AMAZON MKTPLCE PMTS	\$9,412
SKS ELECTRIC	\$7,811
CINTAS 60A SAP	\$5,067
WESTERN DISPOSAL SERVI	\$4,211
INT*IN *PEAR PROJECT S	\$3,315
AMAZON.COM	\$3,238
WESTIN	\$3,055
GEMPLER'S	\$2,950
COURTYARD BY MARRIOTT	\$2,892
WESTERN PAPER DISTRIBU	\$2,720
DAYS INNS	\$2,714
VERITIV	\$2,617
MCSTRUCKIN HARDWARE	\$2,461
GOOGLE *ADW56447175969	\$2,438
THE HOME DEPOT #1546	\$2,436
TFS*FISHER SCI CHI	\$2,404
TFS*FISHER SCI CHI	\$2,404
Total	\$148,390

Total Amount by MCC Description

Use Case Study: AP Automation

Reduce manual data entry from documents such as invoices

Minimize error associated with manual processing

Integrate with existing workflow and enterprise systems

Reduction in manual invoice processing time

Use Case Study: Large Language Models

The image shows a two-part screenshot of the CLAgpt interface. The top part shows the main landing page with the CLAgpt logo and the heading "CLAgpt Knowledge". Below the heading is a disclaimer: "CLAgpt Knowledge is a Beta feature built to provide focused, CLA-specific responses using select sources; please verify all information produced by the model." A smaller text block explains that CLAgpt is a generative AI system trained on CLA's proprietary data and that users should verify information. A text input field contains the query: "I am traveling to a city and I don't recall our travel per diem policy?". A large black arrow points from this input field down to the bottom screenshot.

The bottom screenshot shows the AI's response to the query. The response text is: "The per diem policy for business travel is \$75 per day for domestic travel and \$100 per day for international travel. This includes meals and incidental expenses. If you have any additional questions about the policy, you can refer to the CLA Family Member Handbook or contact your supervisor for more information." Below the response, the source is cited as "[CLA Family Member Handbook \(Page: 74-75\)](#)". A disclaimer at the bottom of the response box states "AI-generated content may be incorrect".

Use Case Study: Microsoft's Copilots

- Windows Copilot
- Microsoft 365 Copilot
- GitHub
- Other copilots
 - Power Platform
 - Microsoft Fabric
 - Azure AI
 - Dynamics 365
 - And more!

Challenges

- Data accuracy
- Bias
- Security
- Trust but Verify
- Know the source
- Fear of use of available tools

Overcoming Challenges

- Be intentional on how AI can provide the most benefit
- Controls – keep a human in the loop, and trust but verify
- Limited, controlled roll out. Pilot first
- Security of infrastructure
- LLM versus OpenAI

How To Get There

✓ Assess current state

 Data readiness

 Develop a roadmap

 Short term and long-term objectives

 Internal working group

 Test the technology

 Educate yourself!

Future Trends

- It's not going away
- Speed of growth will continue to expedite
- Controls?
- There will be many models to choose from
- The use cases will become endless

Question and Answer Session

Thank You!
